Allowable Subject Matter

1. Claims 1-4 and 6-11 are allowed.
2. Since allowable subject matter has been indicated, applicant is encouraged to submit formal drawings in response to this Office Action. The early submission of formal drawings will permit the Office to review the drawings for acceptability and to resolve any informalities remaining therein before the application is passed to issue. This will avoid possible delays in the issue process.
3. The following is an examiner's statement of reasons for allowance. None of the prior art of record either individually or in combination teach the following:
 - a plurality of demand groups defined as "a user defined group of highly substitutable products, further wherein each demand group is a set of, at least one product and at least one of the demand groups is, a set of at least two products."
 - a demand group sales model as a function of price, wherein said demand group sales model provides a single model for modeling sales of all of the products in each of said demand group.

The present invention discloses a method and system for creating a product sales model for each of a plurality of products. The first allowable feature of providing a plurality of demand groups defined as "a user defined group of highly substitutable products, further wherein each demand group is a set of, at least one product and at

least one of the demand groups is, a set of at least two products is not disclosed by any prior art reference. The closest prior art, Ouimet et al, (US 6,078,893) shows a method for tuning a demand model in manner that is stable with respect to fluctuations in the sales history used for the tuning is provided. In Ouimet et al, a market model is selected, which predicts how a subset of the parameters in the demand model depends upon information external to the sales history, an effective figure-of-merit function is defined, which is minimized with respect to the demand model and market model parameters, and the resulting demand model parameters conform to the portions of the sales history data that show a strong trend, and conform to the external market information when the corresponding portions of the sales history data show noise. The next closest prior art, Garg, (US 6,044,357) discloses a computer-implemented method for merging product marketing control, and product inventory control, based on funds availability and funds allocation from the finance division. However, neither Ouimet et al nor Garg disclose the feature of providing a plurality of demand groups defined as "a user defined group of highly substitutable products, further wherein each demand group is a set of, at least one product and at least one of the demand groups is, a set of at least two products. This distinct feature has been added to independent claim 1, and renders it and all claims that depend from it (claims 2, 6, 7, 8, 10) allowable.

The second allowable feature of providing a demand group sales model as a function of price, wherein said demand group sales model provides a single model for modeling sales of all of the products in each of said demand group is not disclosed by any prior art reference. The closest prior art, Ouimet et al, (US 6,078,893) shows a

method for tuning a demand model in manner that is stable with respect to fluctuations in the sales history used for the tuning is provided. In Ouimet et al, a market model is selected, which predicts how a subset of the parameters in the demand model depends upon information external to the sales history, an effective figure-of-merit function is defined, which is minimized with respect to the demand model and market model parameters, and the resulting demand model parameters conform to the portions of the sales history data that show a strong trend, and conform to the external market information when the corresponding portions of the sales history data show noise. The next closest prior art, Garg, (US 6,044,357) discloses a computer-implemented method for merging product marketing control, and product inventory control, based on funds availability and funds allocation from the finance division. However, neither Ouimet et al nor Garg disclose the feature of providing a demand group sales model as a function of price, wherein said demand group sales model provides a single model for modeling sales of all of the products in each of said demand group. This distinct feature has been added to independent claim 3 and renders them and all claims that depend from them (claims 4, 9 and 11) allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
